Snap-on Equipment Releases Portable Imaging Alignment System

Conway, Ar. - May 15, 2008 - Snap-on Equipment announces the release of the world's first portable imaging alignment system - the Prism. The Prism represents Snap-on Equipment's latest version of patented, high-definition camera alignment technology introduced in 1995.

The Prism is the first alignment system to combine the accuracy, speed and advanced diagnostic capabilities of imaging alignment and the productivity benefits of a portable alignment system. The Prism will drive alignment profitability, as technicians can obtain measurements and perform adjustments in half the time of conventional alignment systems.

The Prism provides unparalleled flexibility: it can be used on multiple racks at distances of up to 330 feet from the Wireless Access Point without re-calibration.

The Prism's unique design consists of imaging pods, targets and wheel clamps made from ultra light magnesium – cutting the weight to less than half of competitor's models and making them easier to work with and minimizing technician fatigue.

Rechargeable Lithium Ion batteries in the pods will go a week without recharging under average conditions, a dramatic productivity improvement compared to conventional systems. Easy-to-read LED displays on the pods and screens on the console keep the user informed of battery levels.

Our commitment to excellence and customer satisfaction is also extended to serviceability. With next-day shipping for any necessary replacement parts, the Prism will guarantee the best up-time performance in the industry.

Snap-on Equipment is the world's leading automotive service equipment company and is a division of Snap-on Inc., a leading global innovator, manufacturer and marketer of tools, diagnostic and equipment solutions for professional tool users. Founded in 1920, Snap-on Inc. is a \$2.8 billion S&P 500 Company headquartered in Kenosha, Wisconsin.
