New John Bean Prism EL Alignment System with Imaging Technology Offers High Mobility with Less Complexity

Conway, AR – May 2012 – The new John Bean Prism EL Alignment System is ideal for shops that want maximum flexibility and great value.

“Shops that perform several alignments per week don’t want to compromise on quality or accuracy, but may not be able to justify an investment in other alignment systems,” said David Cox, vice president of sales. “The new John Bean Prism EL with imaging technology is perfect for these shops because it delivers value. It is user-friendly, accurate and mobile – a real ‘difference maker’ when it comes to the alignment business.”

The John Bean Prism EL Alignment System uses the wireless sensor pods to provide the alignment readings, allowing more mobility for the user. Using a mobile computer, it can be used under the car, which allows viewing of the alignment measurements while making the proper adjustments. The Prism EL features easy-to-see measurements and software help screens as well as lithium-ion rechargeable batteries for long-lasting use.

Customers can find out more about the John Bean Prism EL Alignment System and other wheel service products by calling 877-482-4866 or visiting www.snaponequipment.com/johnbean.

About Snap-on Equipment
